

Not All Gauge Boards Are Equal.

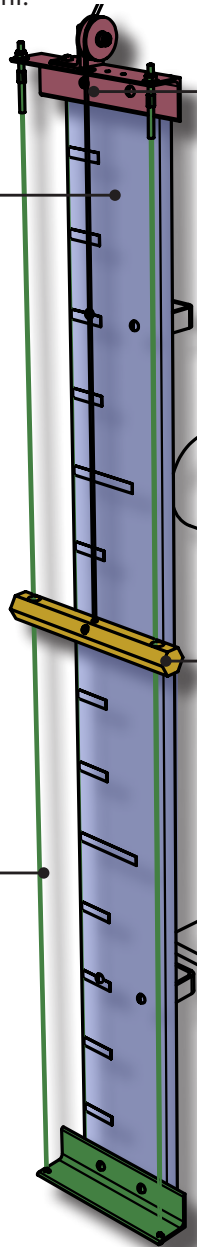

Like the rest of our industry-leading level indication equipment, our *Gauge Board and Indicators* are **premium level indication products** providing unmatched value in the industry. By not including a *Hawkeye Gauge Board and Indicator* as part of your *Hawkeye Premium Level Indication System*, you are not taking advantage of the full value of your premium level indication equipment.

Gauge Board

- Extruded aluminum with robust sturdy 1/8 profile thickness, and anodized for **superior weather resistance** compared to galvanised sheet metal.
- UV-Resistant, graduation decals to your specifications preapplied.
- Managable sections and preinstalled splices make assembly and installation a breeze in a plant or in the field.
- Designed specifically for the Hawkeye Indicator and Indicator Guides.
- Weld-on and Magnetic mounting options available.

Indicator Guides

- Guides offset from gauge board ensure low-friction, no-contact indicator movement.
- Coupled with the Hawkeye Indicator, there is no risk of the system seizing up as a result of the indicator freezing to the gauge board, like with any other cheap wrap-around indicator. **Freezing simply does not happen.**

Top Roller Guide

- Eliminates any messing around trying to align or fit the gauge board to the gauge head and tank. **It all just works.**
- Ensures smooth, low friction operation of indicator and gauge heads.
- Optional swivelling Top Roller Guide makes aligning a snap.

Indicator

- High visibility indicator connects to the float cable in a cinch with integrated thumbscrew cable clamp.
- Large guide holes keep indicator free-moving and on track in the most harsh, freezing conditions.
- Stabilizing tube ensures indicator always runs straight for consistent, smooth operation. **This indicator will not jam up.**

Get the System Advantage.

All of Hawkeye's level gauging equipment is **engineered to work together** to ensure long operational life with minimal installation and maintenance issues. You risk hassles with installation, freezing and, in the rare event something goes wrong, warranty repair by mixing and matching with other gaugeboards and wrap-around indicators. **Save yourself time, money and headaches** by ensuring you complete your *Hawkeye Premium Level Indication System* with a *Hawkeye Gauge Board and Indicator*.
